

Mink at Laurel Creek

One of the many goals of EnviroScience stream and wetland restoration projects is to provide a foundation for ecological recovery and habitat enhancement. Here mink was observed swimming and running through the project area at Laurel Creek, a tributary to Tinkers Creek in Twinsburg, Ohio located within the Cuyahoga River watershed. This project was a stream and wetland restoration completed in 2011 by RiverWorks, an Akron based partnership for stream and wetland restoration consisting of EnviroScience, Inc., GPD Group, and RiverReach Construction.
