

Mitigation Planning

Wetlands Mitigation & Restoration

Wetland Restoration

Wetland mitigation is a term given to creating or enhancing wetlands to offset impacts to other systems. When wetlands impacts are unavoidable, wetlands mitigation often becomes a necessary part of the permitting process. EnviroScience provides our clients the full-range of mitigation process options, ranging from recommending an approved mitigation bank to custom designed, solution oriented plans to achieve project goals.

Mitigation banks are agency approved sites where wetland creation and monitoring is handled entirely by a third party. This option can make the mitigation process fast and easy, however, it can be costly and is not universally available. EnviroScience is familiar with all approved Ohio mitigation banks and will identify the best, most cost-effective facility. If the mitigation bank option is not feasible, or a custom designed wetland is desired, EnviroScience personnel are skilled and experienced in wetland design, creation, and monitoring.
