

Key Services include, but are not limited to:

- NPDES Permits
- Submissions to Regulatory Agencies
- Wetland Delineation
- Stormwater Outfall Permits
- Stormwater System Design
- Stream Surveys

STORMWATER MANAGEMENT SERVICES FOR MANUFACTURING CLIENTS

EnviroScience, Inc. provides technical services to Industrial Manufacturers under a Master Services Agreement to assist with a variety of environmental challenges such as:

- Multi-Sector General Permits and Individual Permits compliance
- Developing NPDES Permit documents for submissions to regulatory agencies
- Technical assistance on environmental and regulatory concerns regarding stream impacts and wastewater issues
- Wetland and stream delineation surveys to assist in project implementation

Many of these services are extended throughout the U.S. and Canada.

Some of our clients are the world's leading manufacturers of Bars, Tubes, Slabs, Hot Rolled Coil, and much more. As part of their operations, stormwater runoff occurs from roads, laydown yards, and scrap storage yards. In the U.S., the discharge of stormwater from these types of industrial sites is regulated by the Multi-Sector General Permit under Section F: Primary Metals. The permit includes benchmark values for specific metals.

EnviroScience assists our clients to characterize all stormwater outfalls from their sites and to document any stormwater sources from offsite. EnviroScience also conducts appropriate stream surveys to verify and confirm all permitted stormwater outfalls from the site, and documents the location and appearance of all other outfalls identified during the stream survey. Any discharges at the time of the survey are visually inspected and recorded.

Many facilities throughout the U.S. are regulated by NPDES Permits and utilize EnviroScience for compliance assistance and regulatory support. Services include reviewing analytical data, drafting NPDES Permit applications, interpreting regulations and regulatory documents, designing of stormwater control systems, and drafting correspondence to regulating authorities. Compliance Services staff have over 100 years of combined experience in the manufacturing and regulatory business, and they bring this level of knowledge to bear on every project.

Compliance Services is just a small part of EnviroScience's Team that provides a wide range of environmental consulting services to challenging situations at any given time.
